

FOR IMMEDIATE RELEASE

CHEMEON and Hubbard-Hall Commence a New Partnership

Minden, NV. – On December 20, 2016 CHEMEON Surface Technology and Hubbard-Hall formally announce a partnership that commenced Nov. 1, 2016.

With more than 20 years of history and 120+ products, CHEMEON is a global leader in product and process development of MIL-SPEC and Military Grade replacements for hexavalent chrome.

“We are laser focused on helping industry and Military prepare for the September, 2017 EU Sunset Date banning the use of Hexavalent Chrome. We are excited to pair CHEMEON technologies with Hubbard Hall’s vast product portfolio, combined technical knowledge, and 167 years of proven ability to serve the American and International manufacturing community.” Said Madylon Meiling CEO of CHEMEON.

In turn, the partnership gives Hubbard-Hall’s customers access to Chemeon’s comprehensive line of anodizing technologies; MIL-SPEC 81706B and MIL-DTL 5541B approved hex-free chromate conversion technologies and laboratory support.

“We look forward to a long partnership with CHEMEON in our continuing mission to provide superior products, expertise and service to our customers.” Said Scott Papst Director of Sales at Hubbard-Hall Inc.

The two companies have already developed a strong working relationship with more than 100 hours of multi-day training sessions led by Hubbard Hall executives and CHEMEON VP Global Solutions Byron Estes at Hubbard-Hall’s Inman facility and CHEMEON’s Tech Center and Laboratory in Minden. This training, on CHEMEON’s anodizing and hexavalent chrome-free chromate conversion technologies, has provided the Hubbard-Hall team with a more in-depth working knowledge of CHEMEON products and technologies for the benefit of their customers.

About CHEMEON Surface Technology

CHEMEON Surface Technology is the only Woman Owned Small Business in the world that is licensed by the US Navy to manufacture and provide MIL-SPEC QPD/QPL Hex Free/Trivalent Chromate Conversion Technology. CHEMEON's patented and proprietary chemistries are internationally recognized for providing environmentally responsible hard material, surface engineering treatments and solutions.
